

# CAFT User Risk Reference

## Tips & Tools

### What is CAFT?

Customer Automated Funds Transfer (CAFT) is a web-based solution that allows a business to manage payments. CAFT is compatible with most accounting software and provides the option to enter data manually online.

With CAFT, businesses can initiate:

- Direct deposits like Payroll and accounts payable.
- Collect payments like loans, accounts receivables, strata or condo fees, donations and club fees/dues.

### CAFT users are responsible to:

- Protect passwords and User IDs.
- Manage CAFT transactions.
- Verify file totals prior to file processing.
- Release files in a timely manner.
- Review CAFT email notifications upon receipt.
- Review the Activity Log.
- Review the History File.
- Verify all NAFT reports.
- Verify account settlement to the settlement register (AFTR0010).
- Contact their financial institutions about any changes to Originator information.
- Immediately notify their financial institution of any unusual activity.

### What do I need to know?

CAFT is a web-based application, therefore Originator accounts could be exposed to cyber fraud if the business or employee's computer system becomes compromised.

If you notice unusual activity:

- Check the CAFT Activity Log and History File information.
- Contact your financial institution.
- Change your CAFT password.
- If you have been compromised, follow the security procedures of your company.

### What can I do to protect myself?

- Users can prevent transaction processing due to key error, theft or fraud by:
- Learning about cyber security.
- Implementing internal controls (segregation of duties, dual authorization, setting CAFT limits).
- Reviewing transaction files for accuracy.
- Reviewing CAFT email notifications.
- Reconciling banking transactions daily.
- Talking to insurance provider about Social Engineering coverage.
- Increasing cyber security practices and building fraud awareness are vital in protecting yourself.

All efforts have been made to provide excellent information on this topic, however we make no guarantees as to the accuracy of the information, particularly as it applies to any existing laws, regulations or policies.*

## **Other best practices and resources:**

- Create strong passwords and never share your User ID or password.
- Lock or logout out of your computer when unattended.
- Never access bank, brokerage or financial services information using open/free Wi-Fi (e.g. coffee shops, public libraries, hotels, etc.).
- Never click on links or attachments from an unexpected email, even if it looks like it is from a person or organization you know.
- Always use the login page on your browser to login to an account or online service (e.g. CAFT) - never use links in an email.
- Limit administrative rights on users' workstations to help prevent the inadvertent downloading of malware or other viruses.
- Ensure virus protection and security software and the operating systems/applications on your computer are updated regularly.
- Familiarize yourself with your institution's account agreement and your businesses liability coverage for fraud.
